

Dj set for Axel.

I can take inspiration from existing software to make an mvp that feels personal to the user or at the least proves my competence in the field.

Auriga modification.

I should work on creating a voice controlled interface that is fully responsive to user needs. In Auriga Sentinel, I should work on the actual intelligence layer and come out with an effective mvp to rival my opponents by end of August.

Mass data storage interface.

I should deal with the data storage interface which will be a fundamental pillar in my tech startup. It should be used in storage of plans and for storage of videos/ large synthesized dataset.

Plan for nexforge immensely.

Nexforge planning and clear definition of the scope, mission and the tech needed to achieve the goal.

Create a competent plan for Drakosanctis.
